

2009 King County Surface Water Design Manual Errata

Elimination of Impervious Surface Percentage Exemption and Small Project Review Threshold

Since Washington State courts have thrown out the KCC 16.82 clearing limits, the Department of Ecology has determined that the County may no longer allow the impervious surface exemption in Core #3, Section 1.2.3, and the rural zone impervious surface limit criterion for Small Project Review in Section 1.1.2.1. This change is effective as of March 22, 2010 and we plan to revise the text of the 2009 Surface Water Design Manual (SWDM) in an errata this fall to include this change.
