

This applies to the storage and/or treatment of contaminated soils such as those excavated during underground fuel tank removal or onsite soil remediation.

Best Management Practices (BMPs) are required by King County Code 9.12. If the BMPs included here are not enough to prevent contamination of stormwater, you will be required to take additional measures.

Required BMPs:

- Cover contaminated soils to keep them from coming into contact with stormwater.
- Contain the material so that nothing flows into or out of the stockpile.

Required Routine Maintenance:

- Sweep paved storage areas as needed. Collect and dispose of soil particles. Do not hose down the area.
- Stock cleanup materials near the storage area.

The Washington State Department of Ecology regulates businesses engaged in this activity. In addition, a permit from the Puget Sound Clean Air Agency is required if the treatment method for removing soil contaminants involves forcing air through the soil.
