

Invasive Knotweed 101 – Identification, Biology and Control

May 11

1:30-3:30 pm

Issaquah Library

10 W. Sunset Way, Issaquah, 98027

This workshop will teach about invasive knotweed species including Japanese, Bohemian, Giant and Himalayan Knotweed. Topics to be covered in the first part include identification, biology, reproduction, distribution and impacts. The second part of the workshop will cover control methods that are effective (and some not so effective) in controlling the different species of knotweed, including manual, mechanical, cultural, biological and chemical control. Included in the chemical control section, we will give comprehensive instructions on the use and care of knotweed injection guns. Individuals completing this workshop will be eligible to borrow the weed program's knotweed injectors.

(WSDA recertification credits requested)

Register by phone at 206-263-6468 or by email to sasha.shaw@kingcounty.gov. Please provide your name(s), agency, organization or company if any, phone number and email. There is no charge for this workshop.
