Hollow stem injection for invasive knotweed web test

What guidance should you follow to be in compliance with laws concerning stem injection?

- The product label of the herbicide you are using
- An online video tutorial produced by King County
- Guidance from your local weed control program
- Advice from Uncle Larry

What type of herbicide is used for hollow stem injection?

- Imazapyr
- Triclopyr
- 2, 4-D
- Glyphosate

Hollow stem injection does not work on which species of invasive knotweed?

- Bohemian
- Himalayan
- Giant
- Japanese

What items on the label are most important when choosing an herbicide for hollow stem injection?

- Glyphosate is the active ingredient
- The type of site where you will be applying the herbicide is listed on the product label
- The label contains instructions for hollow stem injection
- All of the above

State and regional updates

Working group steering committee discussion

3:30-3:45

Facilitated planning discussions

3:45-4:45

Who are you?

What project are you work on?

Do you need any help from other in the group?

What can you offer to others in the group?

Take this opportunity to build partnerships and plan out collaborations in your working area.

Thanks!

See you in the fall!
