RE: Major Maintenance Culvert Replacement Projects for 2009

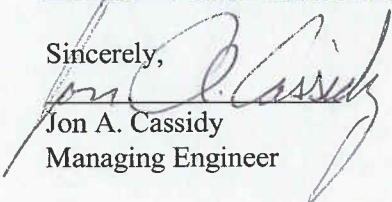

King County wishes to give notice of intent to perform necessary road maintenance activities that may affect your facilities within county right of way. Each year the King County Department of Transportation, Roads Maintenance Section identifies drainage structures throughout King County that are in need of repair or replacement. Due to current design standards or permit requirements some of these structures may need to be replaced with much larger pipes or box culverts.

In an effort to provide notice so that utilities within the road right of way have time to budget and prepare for any relocation required we are providing a map of the proposed major drainage projects currently anticipated for construction in 2009. This map is available through an online link at URL <http://www.kingcounty.gov/transportation/kcdot/Roads/RoadsMaintenance/UtilityCoordination.aspx> Included with the map is a table identifying the approximate size of the replacement structure, location, and County Tracking Number. Since many of these projects are still in the design phase the actual size may vary from what is shown.

This map is not all-inclusive and provides a listing of only those major projects currently planned for construction in 2009. Emergency projects and other maintenance projects may still occur without notice. New projects may be identified, and some projects may not be completed due to scheduling conflicts, budget considerations, or other issues. The County will attempt to keep this map current by updating it quarterly.

If you have facilities in the right of way at any of these locations, you may be affected. If there is a utility conflict with a county road project, you will be required to relocate your facilities pursuant to your franchise or other agreement. Should you have any questions, comments, concerns, or would like plan sets for certain projects mailed to you, please contact Norm Gammell via e-mail at norm.gammell@kingcounty.gov or by phone at 206-296-8199.

Sincerely,

Jon A. Cassidy
Managing Engineer
