Fish Distribution Maps

WRIA 9 Fish Distribution Maps

The WRIA 9 Factors of Decline Subcommittee held two Fish Distribution Workshops (May 18th, 1999 and May 24th, 2000). These workshops gathered existing fish distribution information for WRIA 9 and developed working draft maps. The maps include the distribution of seven species: chinook, coho, sockeye, chum, pink, steelhead and cutthroat trout. The maps also contain limited information regarding species age, spawning observations, outplant locations, fish barriers, and habitat conditions. The maps utilized published studies, personal observations and field data gathered from government and tribal agency officials, private consultants, non-profit representatives and, local and industry experts. King County Department of Natural Resources will administer these maps in ArcView GIS. The maps are found below (figures FD-1 through FD-18) or available on the internet at: <ftp://dnr.metrokc.gov/dnr/VCGIS/xfer/WRIA9maps/>
