Notes:

* The 9/22/2003 sample from well W8 was analyzed by a different method as compared to the other samples. The results for Fecal Coliform, Total Coliform, and *Escherichia coli* are reported as Most Probable Number (MPN)/100 milliliters (ml) of sample rather than as colony forming units (CFU)/100ml.

Concentrations exceeding Maximum Contaminant Levels (MCLs) are shown in **bold italic** typeface (in all Appendix A tables)

Data qualifiers (used in all Appendix A tables)

B - (For all constituents except metals) The analyte was found in the associated method blank at a level that is significant relative to the sample result.

B - (For metals, Table A-3) The concentration is less than the Reporting Detection Limit (RDL) but greater than or equal to the Instrument Detection Limit (IDL).

E - The result is an estimated amount because the value exceeded the instrument calibration range.

H - The laboratory qualified the result due to possible handling errors.

J - The result is an estimated concentration that is less than the Reporting Detection Limit (RDL) but greater than or equal to the Method Detection Limit (MDL).

U - The compound was not detected at or above the RDL. The value given is the lowest reporting detection limit for the constituent in the data set.
