

Options for securing a container liner

1. Bicycle inner tubes

Deflated inner tubes can be collected for free in various sizes from local bicycle repair shops. They are sturdy and easy to use.

2. Bungee cords

Hooking together two bungee cords can be an inexpensive and effective way to secure container liners.

3. Rubber bands

Container rubber bands can be purchased for \$0.99 each by calling Cedar Grove Composting toll free at 1-877-764-5748.

4. Binder clips

Binder clips work well for securing clear plastic bags to recycling containers, but are not recommended for thinner compostable bag liners.

5. No liner

This reduces solid waste but may require containers to be rinsed daily when emptied.
