RE: Cedar Hills Regional Landfill Quarterly Environmental Monitoring Report for Second Quarter 2026

The purpose of this letter is to transmit a copy of the King County Solid Waste Division's *Cedar Hills Regional Landfill Quarterly Environmental Monitoring Report for Second Quarter 2026* for your review. This report includes environmental data collected from April 1, 2026, through June 30, 2026. Per WAC 173-351, the report also contains evaluations of groundwater and surface water quality at the landfill. The data included in this report are consistent with past characteristic reports.

If you have questions or need additional information, please contact me at 206-263-0120, or via email at anjenkins@kingcounty.gov.

CERTIFICATION

KING COUNTY CEDAR HILLS REGIONAL LANDFILL
QUARTERLY ENVIRONMENTAL MONITORING REPORT CERTIFICATION

I certify in accordance with the requirements of Chapter 18.220 RCW, that the contents of this document were prepared under my direction or supervision under a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Where applicable, some specific and related hydrogeologic portions have been duly certified by the responsible groundwater scientist. Based on my inquiry of the person(s) directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete.

Name: Adrienne M. Scott, LG Eric W. Ferguson, LHG	**Title:** Engineer III – Lead Geologist WQPIII – Hydrogeologist	**Date:** November 05, 2026

CHECKLIST FOR GROUNDWATER REPORTING
Municipal Solid Waste Landfills
WAC 173-351-415

Include a signed, completed copy of this checklist with each quarterly and annual report.

Quarterly groundwater reports shall be submitted to the jurisdictional health department and Ecology within 60 days of receipt of analytical data. Annual groundwater reports shall be submitted to the jurisdictional health department and Ecology by April 1 of each year.

Summary of Quarterly Water Quality for the King County Cedar Hills Regional Landfill for the Second Quarter of 2026

This report contains the quarterly environmental monitoring results and an evaluation of the groundwater quality for the King County Cedar Hills Regional Landfill (CHRLF). This evaluation references the hydrogeological conceptual model presented in the *Cedar Hills Regional Landfill Site Wide Hydrogeologic Report Addendum* (Aspect, 2013a), which was adopted in 2014.

Environmental samples were collected and analyzed in accordance with the Environmental Monitoring Sampling and Analysis Plan for Cedar Hills Regional Landfill (SAP; Aspect, 2013b), and the Quality Assurance Project Plan for Environmental Monitoring at King County Solid Waste Facilities. These documents describe procedures to ensure data quality, consistency, and documentation.

Laboratory data was reviewed as outlined in the SAP for compliance with Data Quality Objectives (DQOs) and Quality Assurance/Quality Control (QA/QC). No quality control issues were identified this quarter.

1.0 Regulatory Standards

Groundwater monitoring results are compared to the Water Quality Standards for Groundwaters of the State of Washington (WAC 173-200) and to the National Primary and Secondary Drinking water Regulations (40 CFR Parts 141 and 143). Stormwater monitoring results are compared to the ISGP Benchmark and Effluent Limits Criteria.

2.0 Evaluation Methods

2.1. Data Quality

Groundwater quality is evaluated by comparison of analytical results to regulatory standards, geochemical analysis, and statistical evaluation. Changes made in accordance with federal regulations for the guidance of analytical testing methodologies covered by SW-846 (Test Methods for Evaluating Solid Waste) were implemented in 2017 by the contract laboratory. One specific effect of these changes was to replace the Method Detection Limit (MDL) methodology with the Lower Limit of Quantification (LLOQ) methodology as the basis for determining the lowest quantitative value of an analyte that can be reported. This affected all methods covered within SW-846.

The LLOQ is a performance-based methodology that tests known standards repeatedly to create a calibration curve for a specific method. Commonly, the lowest concentration of the (linear) calibration curve is set as the LLOQ. However, in some cases the LLOQ may be greater than the baseline curve concentration due to lab specific factors such as instrument sensitivity and method analytical uncertainty.

2.2. Groundwater Elevations and Flow Direction

Synoptic water level measurements are taken each quarter at CHRLF. The initial set of water level measurements is recorded at the beginning of the quarter at all groundwater monitoring wells; the second set of measurements is collected upon arrival and in conjunction with water quality sampling at applicable monitoring wells (those scheduled for sampling during the given quarter). Static groundwater elevation, also called hydraulic head, is calculated by subtracting the static water level measurement from the reference point elevation. Upgradient and downgradient wells were determined by the hydraulic head at each well relative to the waste unit and other wells in the same water-bearing unit; upgradient wells have higher hydraulic head measurements relative to downgradient wells.

Quarterly groundwater potentiometric surface maps are generated using Surfer, a gridding, contouring, and 3D surface mapping program. Surfer was used to interpolate and smooth the irregularly spaced three-dimensional groundwater elevation data into grid values that represent modeled hydraulic head values across each aquifer. Next, the grid values are used to generate equipotential contours that represent the groundwater potentiometric surface for each aquifer. The hydraulic gradient is the change in hydraulic head over a distance, and the maximum hydraulic gradient will be perpendicular to the potentiometric contours; therefore, the maximum gradient determines the direction of groundwater flow, with groundwater moving from high hydraulic head values to low hydraulic head values.

2.3. Trilinear Diagrams and Ion Balances

Ion balances provide information about the internal consistency of the sample results. When analytical errors occur, the individual results are reviewed, and any findings are included in this report. For the ion balance calculations, non-detect values are evaluated as half of the method detection limit. To confirm analytical correctness, total cation-anion sums less than 5.0 meq/L must maintain a 10% (or less) difference between the total cation and total anion results. If the cation-anion sum is greater than 5.0 meq/L, the difference between total cations and total anions must be less than 5% to be analytically sound. Deviations from these thresholds may indicate that there was an analytical, sampling, or water quality issue.

After calculating the ion balances, geochemical data is presented on trilinear diagrams. Major cations and anions are plotted on individual triangles as percentages of total milliequivalents per liter (meq/L). The cation and anion results are projected from the triaxial triangles onto the diamond shaped field (also known as a Piper diagram) which represents the overall chemical character of a sample based on the relative concentration of its constituents, but not according to the absolute parameter concentration. Ultimately, the diagrams illustrate differences in major ion chemistry between groundwater samples and can be used to categorize water composition into identifiable groups or hydrochemical facies (Fetter, 2000; Freeze and Cherry, 1979). The facies is a function of lithology, solution kinematics, and flow patterns of the aquifer. The value of the diagram lies in pointing out relationships that exist among individual samples over time. Trilinear diagrams are included with ionic balance calculations in this report.

A leachate sample, collected from monitoring location LS-V1A during the current quarter, was also plotted on the trilinear diagrams. Location LS-V1A represents the combined influent from all areas of CHRLF, prior to pretreatment, and is used as a reference point to which groundwater samples can be compared to evaluate potential leachate impacts on groundwater quality.

2.4. Groundwater Exceedances

Groundwater quality monitoring results are compared to the *Water Quality Standards for Groundwaters of the State of Washington* (WAC 173-200; SGWC) and the *National Primary and Secondary Drinking Water Regulations* (40 CFR Parts 141 and 143; MCL). Analytical results are compared to their respective standards. It must be noted that not all groundwater parameters that are analyzed have established regulatory standards.

In addition to providing information about the water quality relative to established standards, exceedances also provide a cursory evaluation of changes relative to historical data. When an established standard is exceeded for the first time or is a statistically significant increase compared to historical results, the data is reviewed more carefully.

2.5. Volatile Organic Compound Detections

Groundwater Volatile Organic Compound (VOC) detections are used as a groundwater quality evaluation method since most organic compounds are synthetic and occurrences in groundwater may be an indication of an impact from landfilling activities. The groundwater VOC detections sections also report trip blank, field blank, and method blank detections.

2.6. Intrawell Prediction Limits

Intrawell prediction limit methods are used in evaluating groundwater data at the Cedar Hills Regional Landfill. The intrawell prediction limit is a statistical test that compares an analytical result to a computed limit value derived from past analytical results from the same well, considered representative historical well data. Ultimately, the prediction limits are used to determine if a sample is statistically elevated above background conditions.

Before calculating the prediction limit, the data set is tested for normality by application of the Shapiro-Wilk Test for Normality. If the data fail the test for normality, transformed data are tested. When normal or transformed normal data sets are determined, a parametric prediction limit is calculated; when transformations fail the test for normality, a non-parametric method is applied. Future results are compared to these limit values (*EPA, 2009*).

The prediction limits generated in this report are based on a 5% false positive rate (type I error) and depend on the background distribution. If the normality test fails or if the dataset has fewer than 50% detections, then the prediction limit is calculated based on the maximum value from that dataset for the specific analyte. If the dataset is completely made up of non-detect data, then the current method detection limit is used as the prediction limit. For prediction limit calculations, non-detect values are evaluated as half the method detection limit.

For each parameter tested, the background dataset consists of the 50 most recent data points for the well, through the fourth quarter of the previous year. Prediction limits are recalculated annually during the first quarter and updated to include the previous years' sampling results.

Each quarter, analytical results are compared to their respective prediction limits for the current year. If there is a prediction limit exceedance, retesting of that analytical parameter at the respective location is required to determine if the exceedance represents a statistically significant increase over background. A 1-of-3 retesting plan is utilized for prediction limit exceedances at CHRLF (Aspect, 2013b).

3.0 Results and Discussion

3.1. General

Groundwater monitoring well locations are shown on Figure 1. Each monitoring well penetrates one of two water-bearing zones: the shallower Perched Zones (East Perched Zone and the South Solid Waste Area), and the Regional Aquifer. Well-completion details are listed in Table 3.1.1.

Appendix A contains static water level measurements, field data collected during sampling, laboratory analytical results, and the corresponding data qualifier descriptions.

The *Cedar Hills Regional Landfill Site Wide Hydrogeologic Report Addendum* (Aspect, 2013a) presents the latest interpretation of the hydrogeology, and that interpretation has been used in the preparation of potentiometric surface maps and calculations of groundwater velocities. Potentiometric surface maps, horizontal groundwater velocity calculations, and flow directions are included in Appendix B.

Iron, manganese, and arsenic occur naturally in groundwater of this region. The Washington State Department of Ecology conducted a background study on arsenic in groundwater and found that the Puget Sound basin has a natural background of 8 micrograms per liter (ug/L) (Ecology, 2022). Therefore, exceedances of the *Water Quality Standards for Groundwaters of the State of Washington* for these contaminants are believed to be representative of background groundwater quality.

Quarterly groundwater sampling occurs every quarter, semiannual sampling occurs during the second and fourth quarters, and annual sampling occurs during the fourth quarter.

Notes

-- = No information identified.

ft bgs = feet below ground surface

ft amsl = feet above mean sea level

NGVD29 = National Geodetic Vertical Datum of 1929, is used to measure the monitoring well casing elevations at this Site.

PVC = polyvinyl chloride

Sch. 40 or 80 = Schedule 40 or Schedule 80 refers to the wall thickness of the PVC pipe used for construction of the monitoring wells.

TOC = top of casing

3.2. Groundwater within Perched Zones

The East Perched Zone (EPZ) refers to a series of localized areas, predominantly east of the Main Hill area of CHRLF, exhibiting shallow subsurface saturation that appears laterally and vertically discontinuous, predominantly within glacial till and lacustrine silts. The following 28 wells monitor the EPZ:

East Perched Zone		
MW-30A	MW-110	MW-45 [P]
MW-47	MW-111	MW-48 [P]
MW-50	MW-112	MW-55 [P]
MW-62	EB-6	MW-63 [P]
MW-102	MW-25 [P]	MW-79 [P*]
MW-103	WM-27A [P]	MW-98 [P]
MW-104	MW-28 [P]	EB-5 [P]
MW-107	MW-29 [P]	EB-5S [P]
MW-108	MW-41D [P]	
MW-109	MW-41S [P]	

P = piezometer; monitored for water level only
* = damaged, not monitored and under evaluation

Monitoring wells sampled for groundwater quality on a quarterly basis in the EPZ include MW-30A, MW-47, MW-50, MW-62, MW-102, MW-103, MW-104, MW-107, MW-108, MW-109, MW-110, MW-111, MW-112, and EB-6. Monitoring wells MW-25, MW-27A, MW-28, MW-29, MW-41S, MW-41D, MW-45, MW-48, MW-55, MW-63, MW-79, MW-98, EB-5, and EB-5S are monitored for water levels only. MW-79 is damaged and under evaluation.

The following EPZ wells were not sampled during the second quarter of 2026:

Wells	Reason
MW-50	Went Dry during purging on 04/29/26; insufficient recovery on 04/30/26 to collect a sample.
MW-104	Went Dry during purging on 04/29/26; insufficient recovery on 04/30/26 to collect sample.

The South Solid Waste Area Perched Zone (SSWAPZ) refers to areas of perched groundwater South of CHRLF within deeper alluvium, recessional outwash, and/or weathered glacial till. Monitoring well MW-101 monitors the SSWAPZ and monitoring well MW-105 was installed on the south side of the east leachate lagoon to detect potential leaks.

South Solid Waste Area
MW-101
MW-105#

= specific conductance only

Monitoring well MW-101 is sampled for groundwater quality quarterly. Monitoring well MW-105 is monitored quarterly for water level and specific conductance only.

Groundwater quality data from groundwater samples collected from the EPZ and SSWAPZ during the second quarter of 2026 are consistent with recent sample results. Groundwater elevations are within historical ranges (see Appendix A). Since the perched zone sediments are laterally and vertically discontinuous, potentiometric surface maps cannot be generated for these wells.

In accordance with the SAP, if specific conductance at well MW-105 shows a statistically significant increasing trend or exceeds 500 micromhos per centimeter (µmhos/cm) specific conductance, then additional sampling will be conducted. This quarter, conductance at well MW-105 was field measured at 232.8 µmhos/cm. A Mann-Kendall trend test of the most recent eight (8) measurements does not indicate a statistically significant increasing trend in field specific conductance. Due, however, to the identification of an increasing trend during first quarter of 2026, SWD will continue sampling and analysis of Appendix I and II parameters (as well as mercury and dichlorodifluoromethane) at MW-105 through second quarter of 2027 in order to evaluate for potential impacts from the leachate lagoons.

Mann Kendall Test Results: Short-Term
Trend Conclusion:
No monotonic trend ($p < 0.050$)
Mann-Kendall S Statistic: 14
Variance: 65.333
Z-Score: 1.608
P-value: 0.1078
Sen's Slope: 5.183
Number of Data Points (n): 8
Significance Level (α): 0.050
Data Unit: mS/cm
Input Data: 197.7, 200.9, 214.6, 238,
248.7, 240.7, 228, 232.8

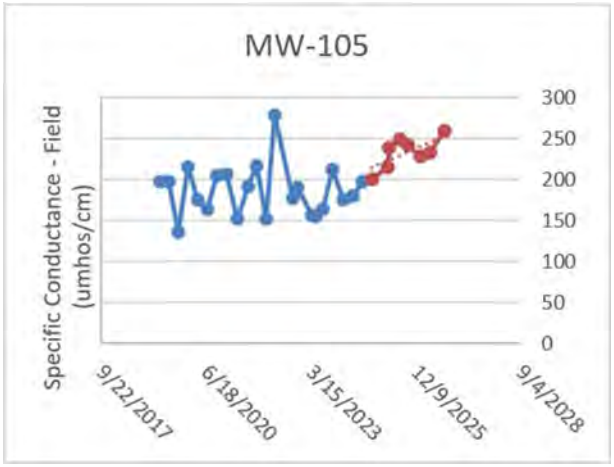

Table 3.2.1 contains the cation/anion balance during this quarter, for the wells screened within the EPZ and SSWAPZ. Values of 0.0000 milligrams per liter (mg/L) within Table 3.2.1 indicate that the given constituent was not detected in groundwater samples during lab analysis. Most wells met the total cation-anion sum and percent difference thresholds. Monitoring well MW-109 had total cation-anion sums above 5.0 meq/L with charge percent differences slightly greater than 5% (5.04%). Given the relatively high total ions (78.62 meq/L), it is most likely that the results represent the observed well conditions; the groundwater sample quality may have interfered with the laboratory sample analyses and some ions may not be accounted for in the balance.

The trilinear diagrams for the East Perched Zone and South Solid Waste Area samples are plotted in Appendix C, Figure C-1 and Figure C-2, respectively.

Most EPZ results show that the cation type is calcium to nondominant with bicarbonate as the dominant anion. In this sample population, the alkaline earths generally exceed alkalis and the weak acids exceed strong acids, with sample composition being >50% hardness causing constituents (Calcium and Magnesium) and >60% weak acids (carbonate and bicarbonate). Most samples are plotted within the magnesium bicarbonate hydrochemical facies, which is consistent with historic samples.

Monitoring well MW-109 exhibits a dominant sodium and potassium cation and bicarbonate anion. Alkalis exceed alkaline earths, and weak acids exceed the strong acids, with the sample composition being <20% hard and >95% carbonate and bicarbonate. The sample plots in the sodium bicarbonate hydrochemical facies, which aligns with previous sampling events.

Monitoring well MW-EB6 exhibits a nondominant to sodium and potassium dominant cation type, with bicarbonate as the dominant anion. Alkaline earths only slightly exceed alkalis and weak acids exceed strong acids, with sample composition being approximately 50-55% hard and >95% carbonate and bicarbonate. The sample plots in the magnesium bicarbonate hydrochemical facies, bordering on mixed-type, consistent with previous results.

South Solid Waste Area Perched Zone monitoring well MW-101 has a nondominant cation type with bicarbonate as the dominant anion. Sample composition is >80% calcium and magnesium and >95% weak acids. Ultimately the sample plots in the magnesium bicarbonate hydrochemical facies, consistent with previous results.

The leachate analytical results from location LS-V1A (Figures C-1 and C-2 in Appendix C) have been plotted on all trilinear diagrams for comparison purposes. Leachate results from LS-V1A exhibit a dominant sodium and potassium cation and bicarbonate anion type. The sample shows that weak acids exceed strong acids and plot within the sodium bicarbonate hydrochemical facies. Leachate quality does not represent natural waters, and the LS-V1A sample is plotted in an area of the graph that is mostly distinct from the Perched Zone groundwater results described above.

Table 3.2.1
Perched Zones - Ion Balance Summary for Groundwater
April 1, 2026 - June 30, 2026

Exceedances of regulatory standards are tabulated and presented in Table 3.2.2. Groundwater in the East Perched Zone has been found to be impacted by landfill gas (Aspect, 2016). There were no new exceedances observed in the Perched Zones this quarter. Nevertheless, several state and federal exceedances persist within the subject wells.

Table 3.2.2. EPZ and SSWA: Summary of Groundwater Quality Criteria Exceedances
April 1, 2026 to June 30, 2026

Parameter	Units	Well	Sample Date	Sample Value	Regulatory Standard	Regulatory Limit

Iron, Total	µg/L	MW-101	04/27/2026	0.483	MCL2; SGWC2	0.3; 0.3
Manganese, Total	µg/L	MW-101	04/27/2026	804 D	MCL2; SGWC2	50[1]; 50

[1]MCL1 for arsenic is 0.010 mg/L. MCL2 for manganese is 0.05 mg/L. Converted standards to µg/L in the table.

MCL1 = National Primary Drinking Water Regulation Maximum Contaminant Level.

MCL2 = National Secondary Drinking Water Regulation Maximum Contaminant Level.

SGWC1 = Washington State Primary Groundwater Quality Criteria.

SGWC2 = Washington State Secondary Groundwater Quality Criteria.

Natural background for arsenic in the Puget Sound Basin is 8 µg/L (Ecology, 2022).

See Appendix A for Data Qualifier Information and Unit Definitions

Wells located in the EPZ and SSWAPZ utilize the intrawell prediction limit method to determine prediction limit exceedances. These prediction limits have been calculated to include all sample results through 2025. The EPZ and SSWA prediction limit exceedances are presented in Table 3.2.3.

Table 3.2.3. EPZ and SSWA: Summary of Intrawell Prediction Limit Exceedances

April 1, 2026 to June 30, 2026

Parameter	Units	Well ID	Sample Date	Sample Value	Prediction Limit (PL) Value
East Perched Zone					
Selenium, Total	µg/L	MW-108	4/22/2025	0.548	0.5
Vanadium, Total	µg/L	MW-112	4/28/2026	1.71	1.51

See Appendix A for Data Qualifier Information and Unit Definitions

Per the SAP, retesting protocols for this quarter are as follows:

- MW-EB6 is exiting the retesting protocol in 2Q26 for total chromium.
- MW-112 is exiting the retesting protocol in 2Q26 for total selenium.
- MW-109 is exiting the retesting protocol in 2Q26 for toluene.

- MW-108 is entering the retesting protocol in 2Q26 for total selenium.

- MW-112 continues retesting protocol in 2Q26 for total vanadium; this result confirms the 1Q26 exceedance and represents 2-of-3 under the 3-of-3 retesting plan.

No other prediction limit exceedances were reported this quarter for Perched Zone monitoring wells.

Detections of volatile organic compounds in this zone are tabulated and presented in Table 3.2.4. Perched zone detections this quarter generally appear to be consistent with past results, with most VOC concentrations showing values comparable or lower than those from previous years. Volatile organic compounds will continue to be monitored and analyzed quarterly, and future recurring volatile organic compounds detections will continue to be evaluated to determine any changes in trends.

See Appendix A for Data Qualifier Information and Unit Definitions

3.3. Groundwater within Regional Aquifer

There are 44 wells completed in the Regional Aquifer that are monitored either quarterly or semiannually at CHRLF. Water levels are monitored in each well at the beginning of every quarter. A subset of 28 Regional aquifer wells are sampled for quarterly groundwater quality monitoring, while an additional 16 wells are sampled semi-annually, during the 2nd and 4th quarters.

Water Table Wells - Quarterly		
MW-60[U]	MW-113[U]	MW-74R
MW-66[U]	MW-114[U]	MW-80
MW-81[U]	MW-115[U]	MW-85
MW-83[U]	MW-68	MW-87
MW-84[U]	MW-69[*]	MW-93
MW-94[U]	MW-72	MW-106[P]
Water Table Wells – Semiannual		
MW-64[U]	MW-67	
MW-73[U]	MW-86	
MW-76[U]	MW-88	
MW-82[U]	MW-95	

Deep Wells - Quarterly	
MW-59[U]	MW-91[P]
MW-75	MW-99[PU]
MW-22P[P]	NPW-1[P]
MW-43[P]	NPW-3[P]
MW-90[P]	
Deep Wells – Semiannual	
MW-21[U]	MW-57[PU]
MW-24[U]	MW-58A[PU]
MW-54[QU]	MW-65[U]
MW-56[U]	MW-89

P = Piezometer; monitored for water level only
Q = Previously monitored for water level only; sampled semi-annually for VOCs per 2022 request by QCF & EPA
U = Upgradient
[*] = Damaged, not monitored and under evaluation

Monitoring wells that are sampled for groundwater quality include:

- Quarterly: MW-59, MW-60, MW-66, MW-68, MW-69, MW-72, MW-74R, MW-75, MW-80, MW-81, MW-83, MW-84, MW-85, MW-87, MW-93, MW-94, MW-113, MW-114, and MW-115.

- Semi-Annually: MW-21, MW-24, MW-54, MW-56, MW-64, MW-65, MW-67, MW-73, MW-76, MW-82, MW-86, MW-88, MW-89, and MW-95.

Monitoring wells MW-22P, MW-43, MW-90, MW-91, MW-99, and MW-106, as well as water supply wells NPW-1, and NPW-3 are monitored for quarterly water levels only. During 1st and 3rd quarters, semi-annual monitoring wells are also monitored for water level only.

The following Regional Aquifer wells were not sampled during the second quarter of 2026:

Wells	Reason
MW-69	Damaged well

Groundwater quality data from samples collected from the Regional Aquifer during the second quarter of 2026 are consistent with recent sample results. Analytical results for total alkalinity, chloride, calcium, magnesium, and sodium at upgradient monitoring well MW-83 are generally higher in recent years than in historical data prior to 2010. However, the second quarter 2026 results for these analytes did not exceed regulatory standards at MW-83. This pattern can also be seen, though to a lesser degree, in analytical results from upgradient monitoring wells MW-56, MW-76, MW-82, and MW-94.

Groundwater elevations and potentiometric surfaces are within historical ranges and reflect seasonal responses to precipitation (see Appendices A and B). Calculated groundwater elevations, flow directions, gradients, and velocities are within historical ranges conform with past Potentiometric Surface Map and Groundwater Flow Analysis Reports (see Appendix B).

Table 3.3.1 contains the cation/anion balance during this quarter, for the wells screened within the Regional Aquifer. Values of 0.0000 mg/L within Table 3.3.1 indicate that this constituent was not detected in groundwater samples during lab analysis. Nearly all Regional Aquifer monitoring wells met the total cation-anion sum and percent difference thresholds. Monitoring well MW-80 had total cation-anion sums above 5.0 meq/L with charge percent difference greater than 5% (11.4%). It is most likely that the results represent the observed well conditions; the groundwater sample quality may have interfered with the laboratory sample analyses and some ions may not be accounted for in the balance.

The trilinear diagrams for the current quarter show Regional Aquifer samples plotted from the upgradient wells (Appendix C; Figure C-3), as well as the downgradient wells (Appendix C, Figure C-4).

The upgradient groundwater samples generally have a nondominant to slightly calcium-dominant cation type with bicarbonate as the dominant anion. In this sample population, the alkaline earths exceed alkalis and the weak acids exceed strong acids, with sample composition being >70% hardness causing constituents (Calcium and Magnesium) and >60% weak acids (carbonate and bicarbonate). Ultimately, the upgradient samples are plotted within the magnesium bicarbonate hydrochemical facies, which is consistent with historic samples.

Downgradient groundwater samples show a nondominant or slightly magnesium-dominant cation type, and excluding well MW-87 (nondominant), samples have bicarbonate as the dominant anion. Excluding well MW-87, downgradient wells show >75% calcium and magnesium as well as >55% weak acids; these wells mostly plot within the magnesium bicarbonate hydrochemical facies. Monitoring well MW-87 also shows >75% calcium and magnesium, but with <50% weak acidity; the subject well plots in a mixed type area of the diagram, which is consistent with past samples.

The leachate analytical results from location LS-V1A (Figures C-3 and C-4 in Appendix C) have been plotted on all trilinear diagrams for comparison purposes. Leachate results from LS-V1A exhibit a dominant sodium and potassium cation and bicarbonate anion type. The sample shows that weak acids exceed strong acids and plot on the border between sodium bicarbonate and "mixed type" hydrochemical facies. Leachate quality does not represent natural waters, and the LS-V1A sample is plotted in an area of the graph that is mostly distinct from the Regional Aquifer groundwater results described above.

Exceedances of regulatory standards are tabulated and presented in Table 3.3.2. There were no new exceedances observed in the Regional Aquifer during this quarter. Nevertheless, several state and federal exceedances persist within the subject wells.

[1]MCL1 for arsenic is 0.010 mg/L. MCL2 for manganese is 0.05 mg/L. Converted standards to µg/L in the table.
MCL1 = National Primary Drinking Water Regulation Maximum Contaminant Level.
MCL2 = National Secondary Drinking Water Regulation Maximum Contaminant Level.
SGWC1 = Washington State Primary Groundwater Quality Criteria.
SGWC2 = Washington State Secondary Groundwater Quality Criteria.
Natural background for arsenic in the Puget Sound Basin is 8 µg/L (Ecology, 2022).
See Appendix A for Data Qualifier Information and Unit Definitions

The prediction Limits are calculated for the inorganic constituents listed in Appendix I of WAC 173-351-990, as well as the organic parameters recently detected in the Regional Aquifer (cis-1,2-dicholoethene, tetrachloroethene, trichloroethene, and vinyl chloride). Exceedances of the predictions limits are tabulated and presented in Table 3.3.3; these prediction limits have been calculated to include all sample results through 2025.

Table 3.3.3. Regional Aquifer: Summary of Intrawell Prediction Limit Exceedances
April 1, 2026 to June 30, 2026

Crossgradient & Downgradient					
Barium, Total	µg/L	MW-74R	04/15/2026	24.5	22

See Appendix A for Data Qualifier Information and Unit Definitions

Per the SAP, retesting protocols for this quarter are as follows:

- MW-113 is exiting the retesting protocol in 2Q26 for nitrate.
- MW-74R is exiting the retesting protocol in 2Q26 for total nickel.
- MW-66 is exiting the retesting protocol in 2Q26 for total selenium.
- MW-68 is exiting the retesting protocol in 2Q26 for total zinc.
- MW-59 is exiting the retesting protocol in 2Q26 for cis-1,2-dichloroenethene.

- MW-76 is entering the retesting protocol in 2Q26 for total arsenic, total chromium, and total vanadium.
- MW-56 is entering the retesting protocol in 2Q26 for nitrate.
- MW-65 and MW-74R are entering the retesting protocol in 2Q26 for total barium.
- MW-114 is entering the retesting protocol in 2Q26 for total silver.

No other prediction limit exceedances were reported this quarter for Regional Aquifer monitoring wells.

Detections of volatile organic compounds in the Regional Aquifer are tabulated and presented in Table 3.3.4. Regional Aquifer detections this quarter generally appear to be consistent with past results, with most VOC concentrations showing values comparable or lower than those from previous years. Volatile organic compounds will continue to be monitored and analyzed quarterly, and future recurring volatile organic compounds detections will continue to be evaluated to determine any changes in trends.

Table 3.3.4. Regional Aquifer: Summary of Volatile Organic Compound Detections
April 01, 2026 – June 30, 2026

Parameter	Units	Well ID	Date	Sample Value
Upgradient				
Acetone	µg/L	MW-81	04/20/2026	6.63
Cis-1,2-Dichloroethene	µg/L	MW-56	04/08/2026	0.625
		MW-59	04/09/2026	1.45
		MW-65	04/09/2026	0.12 JT
		MW-76	04/09/2026	0.201
Tetrachloroethene	µg/L	MW-76	04/09/2026	0.33
Trichloroethene	µg/L	MW-76	04/09/2026	5.89
		MW-82	04/14/2026	3.69
		MW-83	04/06/2026	2.62
		MW-94	04/08/2026	1.83
		MW-114	04/14/2026	9.81
		MW-115	04/09/2026	4.46
Vinyl Chlroide	µg/L	MW-54	04/09/2026	0.068 DJT
		MW-65	04/09/2026	0.034 DJT

3.4. Offsite Private Wells

In addition to the monitoring wells immediately surrounding the CHRLF, KCSWD also collects periodic groundwater samples from each of four off-site drinking water supply wells used by neighboring landowners and residents. These wells are tested once per year (typically during 4th quarter) for the same suite of analytes as the Regional Aquifer monitoring wells. There are no monitoring results to report for these wells from the second quarter of 2026.

3.5. Queen City Farms Monitoring

In 1992, the EPA issued an Administrative Consent Order that required KCSWD to conduct environmental monitoring and reporting activities related to the Queen City Farms (QCF) site that borders CHRLF to the south. In 2007, EPA discontinued some of the required monitoring and reporting, but the Order remained in effect. In 2022, EPA sent letters to KCSWD reinstating specific environmental monitoring and reporting requirements (EPA, 2022). In response to the 2022 communications, KCSWD engaged with EPA and QCF representatives to collaboratively

identify and implement monitoring and reporting activities that would meet EPA and QCF needs. This monitoring has included semi-annual groundwater quality sampling for cis-1,2-DCE, PCE, TCE, and VC at monitoring wells MW-54, MW-57, MW-58A, and MW-60, which were previously monitored only for quarterly water levels. In an email dated September 24, 2025 the US EPA communicated to KCSWD that VOC sampling was no longer required at monitoring wells MW-57, MW-58A, and MW-60.

4.0 Stormwater & Surface Water

Appendix D contains ISGP benchmarks and effluent limits, surface water staff gage measurements, field data collected during sampling, laboratory analytical results, corresponding data qualifier descriptions, and the quarterly ISGP Discharge Monitoring Report (DMR). Surface water and stormwater monitoring locations at CHRLF are shown on Figure 2. Field monitoring personnel confirmed that June 2026 surface water staff gages were measured, however the field sheet appears to have been lost before it could be scanned. Electronic field documentation is in the process of being implemented by SWD field personnel and will reduce the risk of potential field data loss in the future.

CHRLF stormwater discharge is authorized by an Industrial Stormwater General Permit (ISGP) issued by the Washington State Department of Ecology. Sampling stations SW-N4, SW-SL3 and SW-GS1 are the designated points for comparison to permit benchmarks and effluent limits. Beginning in 2025, all ISGP compliance samples are also analyzed for polyfluoroalkyl substance (PFAS). The following ISGP effluent limit exceedances were reported during the second quarter of 2026:

- Field Turbidity at ISGP monitoring location SW-SL3 exceeded the corresponding ISGP benchmark of 25 Nephelometric Turbidity Units (NTU) with a reading of 25.4 NTU (4/14/2026). Field personnel collected a second sample and performed a retest (10.8 NTU) on the following day (4/15/2026), which was below the benchmark and decreased the monthly average (18.1 NTU) to less than 25 NTU.
- An oily sheen was observed on the water at ISGP monitoring location SW-GS1 during a routine inspection (4/14/2026). A sample was collected, which did not exceed any of the other ISGP benchmarks or effluent limits.

Surface water monitoring location SW-E1 monitors surface water east of CHRLF before it flows offsite at the east boundary of the property and is monitored quarterly for the same list of analytes as groundwater samples from the EPZ. During the second quarter of 2026, a surface water sample was successfully collected from monitoring location SW-E1. Analytical results for the sample taken this quarter appear to be consistent with past samples from SW-E1.

Field and analytical data from all second quarter 2026 stormwater and surface water samples can be found in Tables D-1 through D-8 of Appendix D.

5.0 Leachate

Leachate data for the second quarter of 2026 is compiled in Appendix E (Tables E-1 through E-6). Figure 3 shows the leachate monitoring locations.

6.0 Landfill Gas Monitoring

Landfill gas presence is monitored by a network of compliance probes installed around the perimeter of the landfill (see Figure 4). Probes are monitored monthly, and the results are presented in Appendix F.

Methane was not detected at or above the regulatory limit (LEL) in any compliance gas probes this quarter. Building monitoring shows trace amounts of methane, with all concentrations measuring less than 0.01% by volume.

7.0 Meteorological Data

Meteorological data for the second quarter of 2026 is compiled in Appendix G.

8.0 Top Deck Report

The Top Deck Report for the second quarter of 2026 can be found in Appendix H.

9.0 Site Maintenance and Site Improvements

To ensure proper waste fluid extraction from the landfill, KCSWD relies on a network of leachate, landfill gas, and dual-phase extraction wells at the CHRLF. Recent additions to this network include 18 vertical dual-phase extraction wells installed on top of Areas 4, 5, 6, and 7 in 2023. These wells utilize Lorentz PS2 progressive cavity pumps, chosen for their effectiveness at pumping viscous fluids such as those found in portions of CHRLF.

From late 2023 through early 2024, three quarters of these wells sustained damage to their pumping systems from a combination of severe winds, local wildlife, and freezing discharge lines, as well as miscellaneous mechanical and electrical issues at the remaining wells. Through 2024 and 2025, KCSWD has worked with Lorentz to identify the most likely causes and potential preventative measures for these issues. During the first quarter of 2026, replacement pumps were installed in 4 of the vertical wells, A5VW0001, A5VW0003, A6VW0002, and A7VW0012. Upgraded components included rigid stainless steel discharge piping as opposed to flexible discharge hose, protective stainless-steel mesh on all above-ground power cables to prevent damage from wildlife, knock-out drains to facilitate pump maintenance, and upgraded I/O boards to enable simultaneous collection of down-well temperature and liquid level data. Anticipated future improvements include check valves on all discharge lines and higher-capacity batteries to maintain data transmission during periods of low irradiation. Three additional pumps are planned for installation in 2026, pending camera inspection and temperature profiling in the proposed wells.

TECHNICAL MEMORANDUM

August 26, 2026

TO: Jerome Cruz, Environmental Scientist III, Environmental Health Division, Public Health – Seattle and King County

VIA: Eric Ferguson, Water Quality Planner – Hydrogeologist, Science and Technical Support Section, Water and Land Resources Division, DNRP

FM: Adrienne Scott, LG, Engineer III – Lead Geologist, Environmental Science & Compliance Section, Solid Waste Division, DNRP

RE: Potentiometric Groundwater Surface Maps & Groundwater Velocity Calculations
Second Quarter 2026 Results
Cedar Hills Regional Landfill, King County, Washington

The King County Water and Land Resources Division (WLRD) submits this memorandum report on groundwater conditions during the second quarter of 2026 for the regional aquifer beneath the Cedar Hills Regional Landfill (Landfill), in accordance with the *Scope of Work for Services to King County Solid Waste Division – Facility Engineering and Sciences Section* (WLRD, 2023). King County Solid Waste Division (SWD) personnel measured regional aquifer groundwater levels at the Landfill on April 1, 2026; the measurements were used to:

1. Evaluate the potentiometric groundwater surface elevation for the regional aquifer;
2. Determine the groundwater flow direction and horizontal gradient for the regional aquifer; and
3. Calculate the groundwater velocity of the regional aquifer.

There are no significant changes in the groundwater conditions for the regional aquifer in this quarter, when compared to the report submitted for the first quarter of 2026.

Groundwater Elevation Data

The SWD recorded regional aquifer groundwater level measurements during the second quarter of 2026. According to Aspect Consultants, monitoring wells with water levels within ten feet of the top of the screened interval are wells that are completed at the water table and are considered regional aquifer wells as referred to in *Potentiometric Groundwater Surface Mapping and Groundwater Velocity Calculation – Cedar Hills Landfill* (Aspect, 2010) and in *Area 8 Development, Monitoring Well Replacement Report* (HDR, 2021).

Table B-1 lists the groundwater monitoring well identifications, locations, top of well casing elevations, bottom of screen elevations, measured depth to groundwater levels, and calculated groundwater elevations for monitoring wells screened in the regional aquifer. Groundwater elevations from 24 regional aquifer wells were used to model the potentiometric surface contours. Groundwater elevations were within 3.69 feet of the previous quarter measurements, and the mean water level difference was 1.08 feet lower.

Figure B-1 shows the groundwater elevation at each well location, groundwater movement arrows, and the potentiometric surface contours for the regional aquifer for the current quarter.

Direction of Groundwater Flow

Potentiometric surface maps represent the modeled groundwater surface at depth. The potentiometric maps are generated by interpolating data between the calculated groundwater elevations at the monitored wells. Each potentiometric contour represents a line of equal hydraulic head where the groundwater elevation remains constant. Groundwater is expected to flow from high elevations to low elevations, with the direction of flow perpendicular to the potentiometric contour.

Figure B-1 shows groundwater flow directions in the regional aquifer. The figure shows that groundwater in the regional aquifer generally flows to the north with minor components of flow in the following areas:

- North, north-northwest, north-northeast to northeast in the *northern portion* of the Landfill,
- north, north-northwest beneath the *central portion* of the Landfill, and
- north, northwest and north-northeast beneath the *southern portion* of the Landfill.

Table B-2 reports the flow direction for each portion of the regional aquifer. Flow directions this quarter are similar to the flow directions reported previous quarter.

Groundwater Parameters

Table B-2 presents a summary of the groundwater parameters. Mean horizontal hydraulic conductivity and effective porosity values were based on the ranges referred to in *Potentiometric Groundwater Surface Mapping and Groundwater Velocity Calculation – Cedar Hills Landfill* (Aspect, 2010). The mean horizontal hydraulic conductivity for the regional aquifer beneath the Landfill is 60 feet per day (ft/d) in the northern and central portions and 0.18 ft/d in the southern portion of the regional aquifer beneath the Landfill (Aspect, 2010). Average effective porosities are 24 and 26 percent, respectively, for the same areas (Aspect, 2010).

Gradients

The hydraulic gradient for the regional aquifer was determined using potentiometric surface maps (Figure B-1). Table B-2 lists the gradients of regional aquifer for the northern, central, and southern portions beneath the Landfill.

The calculated hydraulic gradient is greatest under the southern portion of the Landfill (0.014 ft/ft) and slightly lower under the rest of the Landfill. Gradients calculated for the regional aquifer are within the range of gradients calculated previous quarter.

Groundwater Velocities

Average horizontal groundwater velocities for the regional aquifer beneath the Landfill are based on spatial differences in aquifer parameters, hydraulic gradients, and calculations using the following formula:

where:

$$v = \frac{1}{n_{eff}} K \frac{\Delta H}{\Delta L}$$

v = Groundwater velocity [L/t]

n_{eff} = Effective porosity [dimensionless]

K = Hydraulic conductivity [L/t]

$\frac{\Delta H}{\Delta L}$ = Hydraulic gradient [L/L]

Table B-2 summarizes the groundwater parameters used to calculate groundwater velocities for the regional aquifer in the northern, central, and southern portions beneath the Landfill. The mean horizontal groundwater velocities are lowest under the southern portion of the Landfill (0.010 ft/d) and highest under the central portion of the Landfill (with a mean of 1.94 ft/d). The velocities calculated for the regional aquifer this quarter are within the range of groundwater velocities calculated previous quarter.

Overall DMR Notes/Comment

KC SWD personnel conducted an investigation to determine the cause of the oil/grease sheen observed at GS1. The investigation did not determine a definitive source, cause, or contributing factors: no industrial activities were observed that would have caused the observed sheen, BMPs were determined to be in place and implemented properly.

KC SWD personnel conducted an investigation to determine the cause of the oil/grease sheen observed at GS1. The investigation did not determine a definitive source, cause, or contributing factors: no industrial activities were observed that would have caused the observed sheen, BMPs were determined to be in place and implemented properly.

Leachate Data

Laboratory Qualifiers
Unit Definitions
Field Parameters
Conventional Parameters
Dissolved and Total Metals
Volatile Organic Compounds (VOCs)
Pesticides, Herbicides, PCBs
Polyfluoroalkyl Substances (PFAS)

Table E-i
KING COUNTY SOLID WASTE DIVISION
LABORATORY QUALIFIERS
(Updated 8/27/2015)

QUAL	QUALIFIER DESCRIPTION
U	Undetected; Analyte Concentration Less than Method Detection Limit (< MDL)
T	Estimated; Less than Reporting Detection Limit (<RDL) but Greater than Method Detection Limit (> MDL)
J	Reported Value is an Estimate
B	Matrix Target Analyte Present in Blank, AND, Sample Result Less than or Equal to 10x Blank Detection
C	Confluent Growth
E	Estimated; Outside Expected Accuracy
H	Exceeds Holding Time
R	Data Rejected
S	Sample Handling Errors
X	Too Numerous to Count
D	Re-analysis Due to Dilution
P	PASS – Qualitative Result Acceptable
F	FAIL – Qualitative Result is not Acceptable
G	Estimated with Low Bias (Coliform; BOD; All Other Chemistry Parameters)
L	Estimated with High Bias (BOD; All Other Chemistry Parameters)

Table D-ii
KING COUNTY SOLID WASTE DIVISION
UNIT DEFINITIONS

UNIT ABBREVIATIONS	UNIT DEFINITIONS
°C	degrees celcius
CFL/100 mL	colony forming units per 100 milliliters
g/mol	grams per mole
meq/L	milliequivalents per liter
mg/L	milligrams per liter
µg/L	micrograms per liter
ng/L	nanograms per liter
mV	millivolt
ntu	nephelometric turbidity units
pH units	standard pH units
µmhos/cm	micromhos per centimeter

AREA 5 TOP DECK MONITORING
QUARTERLY REPORT

SECOND QUARTER 2026

I. REPORT OVERVIEW

This report provides the quarterly performance analysis of the interim soil cover system over Area 5 in the Cedar Hills Regional Landfill (CHRLF). The intent of the report is to demonstrate that the top deck cover system is functioning to limit infiltration of rainwater, protect surface water quality, and control landfill gas emissions. Monitoring of surface emissions, leachate quantity, and stormwater quality is conducted, and results are presented in this report.

II. LEACHATE MONITORING

Leachate monitoring is performed to demonstrate that the landfill cover system is effectively limiting rainwater infiltration and therefore leachate production.

King County Solid Waste Division (KCSWD) is no longer able to monitor leachate volume solely from Area 5. KCSWD staff continues to evaluate leachate volumes collected throughout the landfill. Table 1 presents a historical account of leachate generation at the site since 1986. The evaluation accounts for variations in rainfall by normalizing the leachate flows in terms of gallons discharged per inch of rainfall. The flow has also been normalized relative to pounds of waste in-place. These normalized values for the entire site are also included in Table 1.

TABLE 1
CEDAR HILLS REGIONAL LANDFILL
LEACHATE PRODUCTION THROUGH 2nd QUARTER OF 2026

Time	Leachate	Surface Area of Refuse	Refuse In Place	Precipitation	Flow			
(year)	(MG/yr)	(Acres)	(lbs)	(in/yr)	(gal/Acre/yr)	(gal/Acre/in)	(gal/lb/yr)	(gal/lb/in)
1986	163.03	138.5	11,328,841,100	54.79	1,177,112	21,484	0.0144	0.00026

* The 353.12 acre value was a plan view area calculated by AUTOCAD, using the area inquiry feature of a closed polyline.

III. SURFACE MONITORING

KCSWD's plan for monitoring the surface of the Area 5 Top Deck is comprised of three (3) components:

1. Landfill gas inspections and surface emissions monitoring.
2. Top Deck surface inspections; and,
3. Settlement monitoring.

The purpose of this monitoring is to detect any conditions affecting the cover system that may permit landfill gas emissions, leachate seeps, or excessive or differential settlement.

Each quarter, monthly Landfill Facility Site Inspections and preventative maintenance are carried out by KCSWD staff. All inspection reports and a summary of maintenance work performed can be viewed in Attachment H-1

Landfill Gas Inspections

Throughout the second quarter of 2026, KCSWD staff performed monthly inspections of the gas system, stormwater system, and cover system of Area 5. During the first quarter, erosion control measures continued to be maintained to mitigate runoff effects at the landfill.

Air Quality Criteria

Each quarter, surface emission monitoring is conducted across the Area 5 Top Deck and its side slopes to verify that methane gas emissions are below regulatory criteria. The second quarter of 2026 surface emission monitoring was conducted April through June of 2026. The results from the surface emission monitoring this quarter can be found in Attachment H-2.

Top Deck Surface Inspections

Visual inspections for indications of leachate seeps are conducted each quarter by KCSWD personnel in conjunction with the surface emissions monitoring and monthly inspections. No indications of leachate seeps were recorded by KCSWD staff on the Area 5 interim cover system during the second quarter of 2026. Inspections conducted by Public Health noted litter present in trees along the west perimeter road and ponding water in overflow area from the sheet lined canal along the dirt road in Area 2/3. These issues were addressed by SWD Operations.

Settlement Monitoring

Settlement of Area 5 is evaluated both through visual inspections and through topographic surveys at control points on the top deck. Due to the work for the closure of Area 7 and the opening of Area 8, all previously surveyed control points in Area 5 were covered. Monitoring location PMX2015 was added in 2015 as a replacement for PMX20074. Monitoring locations can be viewed in Figure H-1.

The most recent settlement levels for Area 5 were measured on December 15, 2025. The survey data is given in Table 2, and the settlement at each point is given in Table 3. At the time of the latest measurements, settlement was progressing at a very low rate with no indication of any differential settlement occurring, nor was there any concern with the interim cover system integrity. Since the latest set of settlement measurements, construction and regrading have

begun in Areas 5 and 6 to prepare these areas for additional future waste placement. As this has resulted in the destruction of the settlement monitoring points, future settlement measurements are not anticipated.

IV. STORMWATER SAMPLING

Collection of Samples

A sample was collected from Area 5 Top Deck stormwater monitoring station SW-TD1 on June 9, 2026. Attempts were made to sample monitoring station SW-TD2, but during these attempts no flow was present and therefore no sample was taken (NST). Figure H-2 shows the Area 5 Top Deck stormwater monitoring station locations.

Comparison stormwater samples were not taken this quarter, as monthly monitoring of surface water sites was discontinued as of January 1st, 2016 per the new Sampling & Analysis Plan (SAP) for the CHRLF. To address this lack of comparative data, the decision was made that the most recent full-year (2015) data available from surface water site SW-S1 would be averaged and used as the comparison basis.

SW-TD1 and SW-TD2 samples are collected and analyzed in accordance with the Area 5 Top Deck Stormwater Runoff Monitoring Plan.

Stormwater Sample Evaluation

Stormwater runoff monitoring locations, field measurements, and laboratory analyses evaluated in this report are intended to assess whether the stormwater runoff from the top deck has been contaminated by the underlying waste. Stormwater samples are collected either during or following significant storm events from four locations on or near the top deck of Area 5. These data are compared to surface water data collected from a location upstream of waste placement activities (monitoring location SW-S1 2015 averaged data).

Stormwater quality is also compared to the leachate quality as collected from the inflow into the aeration ponds (LV1A; formerly LAPI).

The analytes for the top deck stormwater runoff are iron, sulfate, chemical oxygen demand, total organic carbon, alkalinity, and chloride. The stormwater quality results are screened against existing surface water quality criteria (WAC 173-201A) and Benchmarks for the Washington State Industrial Stormwater General Permit. Applicable criteria/benchmarks are listed in Table 4.

TABLE 4		
Water Quality Criteria/Benchmarks For Applicable Parameters		
Parameter	Numerical Criterion	Source
pH	6.5 to 8.5	WAC 173-201A-200
	5 to 9	Industrial Stormwater General Permit
Turbidity	Less than 10 NTU above background if background turbidity is 50 NTU or less, or a 10% increase in turbidity when the background is > 50 NTU.	WAC 173-201A-200
	25 NTU	Industrial Stormwater General Permit
Temperature	20°C	WAC 173-201A-200
Iron	1.0 mg/L	EPA 440/5-86-001 Quality Criteria for Water 1986

Results

Field measurements and analytical results from the Area 5 Top Deck sampling during second quarter 2026 are summarized in Table 5. Results from 2015 stormwater samples collected at location SW-S1 are averaged and presented in Table 6. Leachate results are presented in Table 7.

The following is a parameter-by-parameter discussion of the top deck monitoring results. For each parameter, its importance in evaluating surface water, comparison to water quality criteria/benchmarks (Table 4), to other onsite surface water (SW-S1 – Table 5), to historical surface water data (Table 6), and comparison to representative leachate (LS-V1A – Table 7) is discussed.

- **pH (Field)** result(s) for Area 5 Top Deck sample(s) were within the designated limits per the applicable water quality criteria, and were comparable to historic SW-S1 values. The benchmark range for pH is 6.5 to 8.5 standard pH Units.
- **Specific Conductance (Field)** result(s) for Area 5 Top Deck sample(s) were higher than historic SW-S1 values, potentially due to erosion and entrainment of soil particles. Based on specific conductance results of recent samples at SW-TD1, this value is likely the result of stormwater runoff coming into contact with soil stockpiles stored on top of Area 5. There are no benchmarks or criteria for specific conductance.
- **Temperature (Field)** result(s) for Area 5 Top Deck sample(s) were below the designated limit per the applicable water quality criteria, and were comparable to historic SW-S1 values. Temperature criteria are established for the protection of aquatic life and vary between bodies of water based on use categories designated, per WAC 173-201A-200.
- **Turbidity (Field)** measurement(s) for Area 5 Top Deck sample(s) were above the designated water quality criteria, and higher than historic SW-S1 values. Turbidity criteria are established for the protection of aquatic life and vary between bodies of water based on use categories designated, per WAC 173-201A-200. The Industrial Stormwater General Permit (ISGP) benchmark for turbidity is 25 NTU.
- **Chemical Oxygen Demand** result(s) for Area 5 Top Deck sample(s) were higher than historic SW-S1 values, but were orders of magnitude lower than leachate values at LS-V1A. There are no benchmarks or criteria for COD.

- **Total Organic Carbon** result(s) for Area 5 Top Deck sample(s) were slightly higher than historic SW-S1 values, but were orders of magnitude lower than leachate values at LS-V1A. There are no benchmarks or criteria for TOC.
- **Total Alkalinity** result(s) for Area 5 Top Deck sample(s) were slightly higher than historic SW-S1 values, but were still within the typical range for surface water. There are no benchmarks or criteria for alkalinity.
- **Chloride** result(s) for Area 5 Top Deck sample(s) were lower than historic SW-S1 values and within the typical range for surface water. There are no benchmarks or criteria for chloride.
- **Sulfate** result(s) for the Area 5 Top Deck sample(s) were higher than historical SW-S1 values, but lower than results from leachate samples at LS-V1A. There are no benchmarks or criteria for sulfate.
- **Total iron** result(s) from Area 5 Top Deck sample(s) were higher than historical SW-S1 values, but lower than values for leachate samples collected at LS-V1A. The result was higher than the benchmark value for total iron.

Discussion

The Top Deck stormwater runoff results for second quarter of 2026 were higher than background for some parameters, when compared to historical surface water samples collected from location SW-S1. Current alkalinity, chemical oxygen demand, total organic carbon, total sulfate, and total iron (at SW-TD1) concentrations are higher than the corresponding 2015 results. Results for turbidity and total iron exceeded the benchmark values for surface water quality. Results for specific conductance were lower than historical SW-S1 values but could be the result of field measurement error since they are significantly lower than recent samples collected at SW-TD1.

It is possible that the elevated results are due to erosion of stockpiled soils on top of Area 5. High turbidity and total iron results with relatively low chloride and alkalinity would support this. Upon comparison with surface water and leachate samples, overall, the runoff from the Top Deck much more closely resembles surface water than leachate.

Also considered during evaluation is the possible impact of landfill gas on water quality. Elevated alkalinity (i.e. over 150 mg/L) can indicate a landfill gas contribution to the sample (due to the dissolution of carbon dioxide in water). However, the second quarter sample from SW-TD1 did not have an excessively high alkalinity result, and the serpentine monitoring for LFG emissions did not show any detections in this area. Generally, analysis of the data indicates that landfill gas and leachate are not contributing to increases in surface water parameters; however, continued exposed soil runoff may be marginally impacting surface water quality.

V. CONCLUSION

A sample was collected from Area 5 Top Deck stormwater monitoring station SW-TD1 on April 9, 2026. Attempts were made to sample monitoring station SW-TD2, but during these attempts no flow was present and therefore no sample was taken (NST).

Field and analytical results from second quarter sample(s) indicate several parameters with slightly elevated values compared to historic 2015 surface water sampling results at location SW-S1. Despite these elevated parameters, the runoff from the Top Deck much more closely resembles surface water than leachate. It is likely that the elevated results are due to erosion of stockpiled soils on top of Area 5.

The inspection reports for the second quarter of 2026 showed no issues with the cover system for Area 5 and no indication of LFG presence.

The most recent settlement levels for Area 5 were measured on December 18, 2025 and do not indicate any differential settlement. The survey data is given in Table 2, and the settlement at each point is given in Table 3.

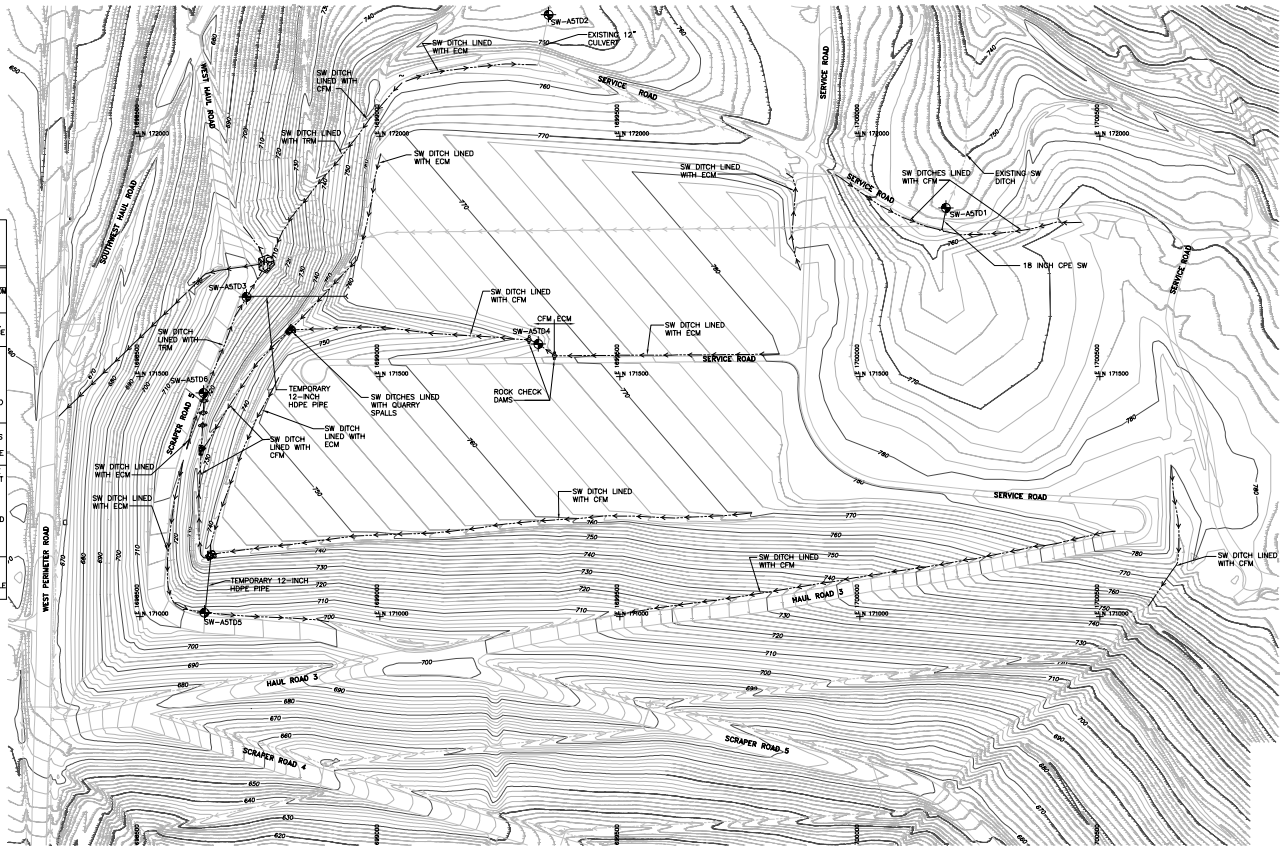

The recent compliant historical performance trend for Area 5, coupled with ongoing inspection results verifying the integrity of the cover all provides evidence that the Area 5 Top Deck Interim Cover System continues to function to prevent interaction between refuse and storm water runoff.

Cedar Hills Regional Landfill
Area 5 Top Deck Report

FIGURES

FIGURE 1
AREA 5 SETTLEMENT MONITORING LOCATIONS

AREA 5 TOP DECK STORMWATER MONITORING STATION

STATION NUMBER	STATION DESCRIPTION
SW-A5TD1	NORTHEAST PORTION OF AREA 5 TOP DECK WHERE RUNOFF FROM THE TOP DECK EXITS AN 18-INCH CULVERT. SAMPLING TO BE PERFORMED AT THE OUTLET OF THE CULVERT.
SW-A5TD2	NORTH SLOPE OF AREA 5 WHERE RUNOFF, FROM THE NORTH SLOPE FLOWING IN A ROADSIDE DITCH, DRAINS INTO A 12-INCH CULVERT. SAMPLING TO BE PERFORMED AT THE OUTLET OF THE CULVERT.
SW-A5TD3*	WEST OF THE AREA 5 TOP DECK, WITHIN THE SCRAPER ROAD 5 ROADSIDE DITCH AT THE OUTLET END OF A TEMPORARY 12-INCH PIPE. THE TEMPORARY 12-INCH PIPE IS IN PLACE, BECAUSE THE WEST SIDESLOPE GEOMEMBRANE DOES NOT CURRENTLY HAVE COVER SOIL. ONCE THE COVER SOIL IS IN PLACE, THE PIPE WILL BE REMOVED AND THE SAMPLE LOCATION WILL NO LONGER BE SAMPLED.
SW-A5TD4	CENTER OF THE WEST PORTION OF AREA 5 TOP DECK WHERE RUNOFF FROM THE TOP DECK DRAINS INTO THE "VALLEY" RUNNING EAST TO WEST. SAMPLING TO BE PERFORMED AT THE INLET OF THE "VALLEY" DITCH.
SW-A5TD5*	THE OUTLET END OF A TEMPORARY 12-INCH HDPE PIPE THAT CONVEYS RUNOFF FROM THE SOUTHWEST CORNER OF THE AREA 5 TOP DECK. THE TEMPORARY 12-INCH PIPE IS IN PLACE, BECAUSE THE SOUTH SIDESLOPE GEOMEMBRANE DOES NOT CURRENTLY HAVE COVER SOIL. ONCE THE COVER SOIL IS IN PLACE, THE PIPE WILL BE REMOVED AND THE SAMPLE LOCATION WILL NO LONGER BE SAMPLED, BECAUSE FLOW IN THE ROADSIDE DITCH AT THIS LOCATION WILL NO LONGER CONTAIN RUNOFF FROM THE AREA 5 TOP DECK.
SW-A5TD6	WEST OF THE AREA 5 TOP DECK, WITHIN THE SCRAPER ROAD 5 ROADSIDE DITCH. THIS SAMPLE POINT RECEIVES TOP DECK FLOW FROM TWO SIDESLOPE DITCHES THAT INTERSECT AT THE SAMPLE LOCATION.

*STATIONS SW-A5TD3 AND SW-A5TD5 WERE TEMPORARY STORMWATER MONITORING STATIONS THAT CEASED TO EXIST AS OF JULY 16, 2007.

Items that Require Actions

OBSERVATIONS, CODE REFERENCES, AND CORRECTIVE ACTIONS
WAC 173-351-210 (4): Plan of operation actions to take for sudden releases of gas, leachate
Observations: Possible leachate weeps in asphalt ditch immediately north of dissipator vault at Horseshoe along the west perimeter road beside Area 7/8. Liquid in ditch was black, other parts had scum, and the liquid appeared to be coming from the geomembrane flap (see pictures). Leachate runoff must be controlled per plan of operation maintenance requirements (WAC 173 -351-210(4)).
Code: WAC 173-351-210 (4) - Criteria for municipal solid waste landfills - Plan of operation
Corrective Action: Provide next steps to control and prevent leachate runoff by July 31, 2026.

General Inspection Information

NOTES
Overall Observations **Inspector Notes:** 1. Water overflow area from the sheet lined canal along the dirt road in Area 2/3 (Service Road 3) continues to be observed in inspections (1/20/2026, 2/23/2026, 3/24/2026, 4/23/2026, 5/12/2026, and present one). See pictures. WAC 173-351-500(2)(a)(i) which requires maintenance of cover including preventing run -on and runoff from eroding or otherwise damaging the final cover. Joseph Newton responded in an email dated 6/16/2026 repairs to this metal sheet lined canal are anticipated to be completed by 7/8/2026. 2. I visited the area where a leachate release occurred on March 12, 2026 at the north end of the landfill near Pump Station 1 (ERTS Incident #745770). Nearby stream bed is overrun with trees and underbrush. Stream bed was dry. Discussions continue with SWD and Ecology on next steps and expectations. 3. Landfilling was observed lapping on to the southwest corner of Area 7. 4. Significant improvement to hanging litter along the trees and shoulder of the west perimeter road near the horseshoe (dissipator vault west of Area 8) was noted. 5. Crews were working at the leachate lagoons, where the aerators at the east lagoon were off while one aerator was operating in the west lagoon. Gate was open. 6. Depression/pond area at the base of the covered soil piles at Area 2/3 has dried up. Nearby soil pile is gone. .

OBSERVATIONS, CODE REFERENCES, AND CORRECTIVE ACTIONS
WAC 173-351-500 (2)(a)(i): Final cover for closed areas must be maintained (vegetation, settlement, erosion, run-on, runoff) **Observations:** Water overflow and ponding from the sheet lined canal along the dirt road in Area 2/3 (Service Road 3) continues to be observed in inspections (1/20/2026, 2/23/2026, and 3/24/2026). Water continues to run down the slope and puddle at the road (see pictures). WAC 173- 351-500(2)(a)(i) which requires maintenance of cover including preventing run -on and runoff from eroding or otherwise damaging the final cover. Although improvement in flow and appearance was noted along other segments, overflow, erosion, and ponding remains at the same location. ***Correct By Date:*** *06/08/2026* **Code:** WAC 173-351-500 (2)(a)(i) - Criteria for municipal solid waste landfills - Post-closure care requirements **Corrective Action:** Respond by June 8, 2026 with plan and schedule to repair portion of sheet lined canal along haul route 2/3 where clogging, overflow, and ponding occurs

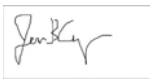

Items that Require Actions

OBSERVATIONS, CODE REFERENCES, AND CORRECTIVE ACTIONS
No Items Noted

General Inspection Information

NOTES
WAC 173-351-210: Develop, keep, and abide by approved plan of operation. A hard copy must be available for inspection at agency's request **Inspector Notes:** Several trucks were observed not using the wheel wash near the weighing station on the way out. Per WAC 173-351-210, the sitewide plan of operation requires the use of the wheel and undercarriage wash facility to reduce the amount of dirt tracked out of the site.
WAC 173-351-220 (2): Litter must be controlled **Inspector Notes:** Litter continues to be observed along the trees and shoulder of the west perimeter road (see pictures) near the horseshoe (dissipator vault west of Area 8) and north of it. All owners or operators of MSWLF units must operate the facility so as to collect scattered litter as necessary to prevent vector harborage, a fire hazard, an aesthetic nuisance, or adversely affect wildlife or its habitat. WAC 173-351-220 (2).
Overall Observations

Inspector Notes: Area 2/3 soil piles contained slumped plastic sheet panels and resulting exposed soil areas (see pictures). Nearby pond area (west of the soil piles) where surface water that drains from the piles was observed to be full of cloudy brown water with oil sheen at the water's edge (pictures provided).

Area 5 = A5	Central Pit = CP	North Flare Station = NFS	
Area 6 = A6	CSW Lagoon = CSW	Southeast Pit Area = SEPA	

State the needs of the repairs in the suggested remedy box.

1. *Emergency*
2. *Regulatory Priority*
3. *Safety Priority*
4. *Maintenance Priority*
    a. *Urgent*
    b. *Routine*
    c. *Deferred*

Overall site description day of site inspection:

Work in Progress:

Overall good, however the site needs specific maintenance to ensure continued SWPPP compliance and structural integrity.

Major Inspection Findings
1. Overflow Structure Crack near the Sand Filter was observed across the concrete apron/structure. This crack needs evaluation to identify repair/maintenance such as sealing/structural grout to prevent internal erosion.
2. Silt fence damage was identified and needs replacement to prevent sediment bypass at Contaminated Storm water Lagoon (CSW).
3. North Siltation Pond silt fence damage remains visible and requires replacement
4. The SS-2 Staff Gauge Plate Damage (SG-7) along the fence line, needs to be replaced.
5. Visible Sand Filter Vegetation Growth is occurring, which needs to be cleared out to maintain design filtration efficiency.
6. Cattail growth continues rapidly within the South Stormwater Pond,

Drainage & Surface Ponding Observations:
1) Area 5/6 surface water ponding is visible adjacent to the access roads and embankments.
2) Surface water ponding is noted past the West Perimeter near the SL3 gauge.
3) Large, localized pools of standing water remain directly on and alongside the West perimeter dirt road.
4) The natural ditch in the West perimeter area is operating at maximum capacity, filled heavily with stagnant-looking water and thick brush.
5) Heavy accumulation of fallen limbs and vegetation debris was noted near the S1 Gauge Station, requiring localized clearing to ensure clear flow pathways.

SWPPP Modifications Necessary? NO

If **Y**, *log changes in Appendix I of SWPPP*

Potential Pollutant Sources NO

Docusign Envelope ID: 663A40EB-4F8C-8DE3-8297-E726C6721650

    c. *Deferred*

Overall site description day of site inspection:

Work in Progress:

Overall structurally intact, however the site needs specific maintenance to ensure continued SWPPP compliance and structural integrity. The site is experiencing widespread seasonal bio fouling, heavy vegetative encroachment across both natural and engineered ditches, and localized infrastructure hazards that must be addressed before the next major wet-weather season.

Major Inspection Findings
1. Significant algal bio fouling was observed clinging to the V-notch weir plate.
2. Following from 2025, the open concrete outlet structure with exposed vertical drop is still not taken care near the SWSL. While temporary high-visibility barricade are present, a permanent, secure grated lid is required to ensure personnel safety.
3. Overflow Structure Crack near the Sand Filter was still there without repair which needs evaluation to identify repair/maintenance such as sealing/structural grout to prevent internal erosion.
4. Storm water conveyance clog risks observed where few small diameter HDPE storm water downspouts near the landfill slopes were heavily surrounded and topped by tall grasses.
5. Natural ditches and stream ways are getting progressively narrower due to rapid, dense brush and tall grass intrusion.
6. Significant weed and brush growth is breaking through the paved invert of the asphalt-lined perimeter ditches.
7. Metal ditches showing signs of misalignment and structural damage,

Drainage & Surface Ponding Observations:
1) Significant localized surface water ponding remains highly visible in the dedicated swales adjacent to Area 5/6 embankments and access roads.
2) Heavy accumulation of fallen limbs and vegetation debris was noted near the S2 Gauge Station, requiring localized clearing to ensure clear flow pathways.
