

***Updated information for specific offsite facilities***

<b>Offsite Facility</b>	<b>Updated Information</b>	<b>Date Added</b>
Heathfield PS	<b>Overflow Elevation from Heathfield PS Wet Well:</b> 160.25 feet <b>Overflow Location:</b> near Sunset Pump Station. Wastewater overflows from the Heathfield Pump Station wet well through an 18-inch diameter overflow line (which reduces to 12-inch-diameter outside the station) to manhole 6, where an 8-inch diameter local sewer line (IE 129.50) conveys wastewater to the Sunset Pump Station. If the local sewer gets overloaded, then wastewater backs up to manhole 6 and overflows at elevation 136.0 to the storm water retention basin and storm drain to Lake Sammamish.	8/1/01

PS = Pump Station

RS = Regulator Station/Structure

SWTP = Stormweather Treatment Plant
