

APPENDIX E

KING COUNTY FLOOD PROTECTION FACILITIES

This appendix contains a list of the revetments and levees managed by King County. In addition to providing information on the location, type and length of each flood protection facility, this appendix provides the status of each facility with respect to its eligibility for federal flood damage repair funding. Eligibility for federal funding to repair flood damages varies with the type and condition of the flood protection facility in question. While federal programs do exist that can fund improvements to revetments and levees on a case by case basis, the primary means through which flood protection facility flood damages are repaired using federal funds are the Public Assistance Program administered by the FEMA and the Rehabilitation and Inspection Program managed by the U.S. Army Corps of Engineers.

Federal Funding for Repairs to Revetments and Other Flood Protection Facilities – The Public Assistance Program

The Public Assistance Program, authorized by the Robert T. Stafford Disaster Relief and Emergency Assistance Act of 1988, is administered by FEMA. This program is intended to help communities recover from damages caused by federally declared disasters. The act includes provisions that allow local governments to receive funding for up to 75% of the costs to repair damaged infrastructure that is not eligible for assistance through other federal programs. Since levees are eligible for assistance under the federal Rehabilitation and Inspection Program managed by the Army Corps of Engineers, they are not eligible for assistance through the Public Assistance Program..

The Public Assistance Program can, however, play a vital role in the repair of revetments and other flood protection related facilities such as pump stations, drainage systems and sedimentation ponds. While there are no specific standards that a revetment must meet to be eligible for this program, funds are allocated only for repairs to damages caused by the federally declared disaster. Damages caused by non federally declared flood disasters are not eligible through the Public Assistance Program. In addition, damages documented by previous post-disaster inspection, but that not repaired, are ineligible and can result in the entire flood protection facility being ineligible for funding through the program.

This appendix includes tables that provide a summary of the eligibility of King County’s revetments, based on records covering past flood damages documented after federally declared disasters, and documentation concerning of the degree to which these damages were or were not repaired. In these tables, revetments are characterized as being “eligible”, “ineligible” or “partially eligible”. For facilities which have not been chracterized, or where records are not clear, the eligibility for assistance under the Public Assistance Program have been listed as “uncertain.” The designation “N/A” under the column with the heading “PAP” for “Public Assistance Program” indicates that the river protection facility is a levee, and therefore not eligible for the program.

Federal Funding for Levee Repairs – The Rehabilitation and Inspection Program

The Rehabilitation and Inspection Program, promulgated through Public Law 84-99, is managed by the U.S. Army Corps of Engineers. This program is intended to help local jurisdictions repair levees damaged by flood events by providing a 80:20 federal to local cost share for levee repairs. The Rehabilitation and

Inspection Program can implement flood damage repair projects on a levee regardless of whether the damage occurred as a result of a federally declared flood disaster. Participation in the program is voluntary on the part of the local jurisdiction. Levees are eligible for consideration in this program regardless of whether they meet FEMA levee certification standards. Certification or decertification of a levee by FEMA can affect the 100-year floodplain as portrayed on the FEMA Flood Insurance Rate Maps, but does not affect the ability of the local jurisdictions to seek federal assistance to repair levees through the Rehabilitation and Inspection Program.

To qualify for the Rehabilitation and Inspection Program, levees are initially inspected the U.S. Army Corps of Engineers and the local sponsor to determine whether they meet minimum structural and inspectability standards established by the U.S. Army Corps of Engineers. If a levee meets these standards, it is considered “active” and is eligible for assistance if it is subsequently damaged and if the benefit-cost ratio of the needed repair is favorable. Levees which do not meet the minimum standards during the initial inspection, may become active if deficiencies are corrected. Correcting these deficiencies is the responsibility of the local jurisdiction.

Once enrolled in the Rehabilitation and Inspection Program, levees are reinspected annually to identify potential damages and determine whether minimum standards are still being met. During these inspections, outstanding maintenance needs are noted and the status of each levee is conveyed from the U.S. Army Corps of Engineers to the local jurisdiction via an inspection report. Levees with significant deficiencies may be put on probation, but remain active and eligible for flood damage repair funding until the next inspection. If the documented deficiencies have not been corrected by the next inspection, the levee is considered inactive and ineligible for assistance through the program. At any time, the local jurisdiction may correct deficiencies, request reinspection, and seek restoration of the flood protection facility to active status.

King County currently has approximately 35 miles of levees that could be considered for inclusion for the Rehabilitation and Inspection Program; however, due to structural shortcomings and an ongoing disagreement between King County and the U.S. Army Corps of Engineers concerning appropriate vegetation management standards for salmonid bearing streams in the Pacific Northwest, few of these levees are active in the program. The U.S. Army Corps of Engineers standards were developed for nationwide purposes and require that all vegetation over two inches in diameter be removed from the levees. In the late 1990’s King County took the positions that preventing the natural development of native plant communities on King County levees was inconsistent with the multiple use objective of King County’s River and Floodplain Management Program. While King County annually removes most of the non-native vegetation from its high priority levees for access and inspection purposes, the alteration of native vegetation is limited to the removal of hazard trees and minor damage inherent in the control of invasive species.

In the tables following this section, the status of King County levees with regard the Rehabilitation and Inspection Program is listed as either “active”, “inactive”, “on probation” or “TBD”. “TBD” indicates that the levee still needs to be inspected by the U.S. Army Corps of Engineers. The designation “N/A” Under the column with the header “RIP” for “Rehabilitation and Inspection Program” indicates that the flood protection facility is a revetement, and therefore not eligible for the program.

Conventions used in King County River Protection Facility Tables

The following conventions are used in the tables in this appendix:

Name: The common, historic name used by King County for the levee or revetment. In many cases these names were derived from the names of the landowners at the time the flood protection facility was constructed. In some cases, they are descriptive of the facility location or what it protects or historically protected.

Type: The letter “R” indicates that the flood protection facility is a revetment, the letter “L” indicates that it is a levee, and the letter “O” indicates other types of facilities in the River and Floodplain Management inventory such as a boat ramp or log crib. In some cases, the flood protection facility type is not known, in which case this type designation is left blank.

D/S RM: Downstream River Mile. The number shown indicates the approximate location of the downstream end of the flood protection facility as measured in miles, from the mouth of the river or creek.

U/S RM: Upstream River Mile. The number shown indicates the approximate location of the upstream end of the flood protection facility as measured in miles, from the mouth of the river or creek.

Bank: Indicates which bank the flood protection facility is on when viewed facing downstream. The letter “R” indicates right bank, the letter “L” indicates left bank.

Length: Length of the flood protection facility in feet.

PAP (FEMA): Provides the status of the flood protection facility with respect to the Public Assistance Program administered by the FEMA.

RIP (ACOE): Provides the status of the flood protection facility with respect to the Rehabilitation and Inspection Program administered by the U.S. Army Corps of Engineers. The status of five federally authorized levees, for which, unlike the vast majority of King County’s levees, King County has a contractual obligation to the federal government to maintain, are also included in this column with the label “Authorized.”
