This map has been photogrammetrically compiled from 152.861 mm C.F.L. aerial photographs. Only the 100-year boundaries are shown. The floodway boundaries are shown, which do not include the floodway boundaries that were determined according to 42 C.F.R. 60.5(e).

The data in this map was photogrammetrically compiled from 152.861 mm C.F.L. aerial photographs, and is accurate to within +/− 10 percent of the property boundary. For legal purposes, the parcel line should be referenced to the parcel plan used to describe the property.

This area is mapped based on highwater marks from an analysis not performed for this Flood Insurance Rate Map (FIRM) revision. Highwater marks are the result of a hydrologic analysis and are determined through a set of guidelines. These guidelines are based on floodplain maps and highwater marks collected during the flood event. These guidelines provide a method for determining the location of the floodplain. Highwater marks are the result of a hydrologic analysis and are determined through a set of guidelines. These guidelines are based on floodplain maps and highwater marks collected during the flood event. These guidelines provide a method for determining the location of the floodplain.

See the Table of Contents (TOC) for additional information regarding the source of this map. The TOC contains instructions for determining the location of the floodplain that result from this data. The TOC contains instructions for determining the location of the floodplain that result from this data.
