NOTES TO USERS
This map is to be used in administering the National Flood Insurance Program. It shows flood hazards to provide the flood insurance industry and the Federal Emergency Management Agency with the information required to prepare Flood Insurance Rate Maps and write flood insurance policies. It shows flood hazards to assist the community in planning for flood resistant development and emergency management. This map contains the flood data generated from a flood study that was performed in accordance with the provisions of the National Flood Insurance Program. The data may or may not reflect current elevations and flood hazards. This map may be used to determine if flood insurance is available in this community. To obtain flood insurance, contact your insurance agent and request a Flood Insurance Rate Map.

This map is produced by the National Flood Insurance Program in cooperation with the Federal Emergency Management Agency, the Flood Insurance Study Program of the National Oceanic and Atmospheric Administration, and the National Geodetic Survey. The map is prepared to the National Map Accuracy Standards and is surveyed and scaled to meet the standards of the Flood Insurance Study Program of the National Oceanic and Atmospheric Administration.
