* Beginning in 2009, calculation of turnout is derived from dividing the total number of ballots returned by the total number of active registered voters. Prior to 2009, it is derived from dividing the total number of ballots counted by active registered voters.
 ** Active registered voter count: From 2009 to Feb 2013, the count is taken on the day official Logic and Accuracy Tests were conducted. Effective April 2013, the count is taken on the day before election.
